

Table 3. Listed threatened (T), endangered (E), and experimental population (XN) species and critical habitat (CH) in the CRB states. Species highlighted in orange were included in this analysis; species with no highlight were excluded from this analysis because dreissenids would not be found in their habitat, or the species would not be directly or indirectly affected by rapid response actions for dreissenids.

Whooping crane (<i>Grus americana</i>)	Link				E, XN

¹ Columbia River population.

² Conterminous USA, lower 48 states, except where otherwise designated).

³ Endangered in the western 2/3 of Washington, west of Hwy 97, State Route 17 and US 395. WDFW has primary management authority to the east of that line. Wolves that inhabit tribal lands east of highways 97, 17, and 395 are managed by those tribal entities.

⁴ Washington, Oregon, and California population.

⁵ Pacific coast population.

⁶ Critical habitat was designated in 2005 for 32 areas along the coasts of California, Oregon, and Washington. A recovery plan was finalized in September 2007. On December 17, 2010, the USFWS, along with other federal agencies and the State of Oregon, signed off on a statewide Habitat Conservation Plan. On June 19, 2012, a final rule of critical habitat was published for the coasts of California, Oregon, and Washington.

PROPOSED SPECIES					
North American wolverine (<i>Gulo gulo luscus</i>)					P

Endangered (E)—Any species that is in danger of extinction throughout all or a significant portion of its range.

Threatened (T)—Any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

Proposed (P)—Any species of that is proposed in the Federal Register to be listed under section 4 of the Act.

Non-essential experimental population (XN)—A population of a listed species reintroduced into a specific area that receives more flexible management under the Act.

Critical Habitat/Proposed Critical Habitat (CH, PCH)—The specific areas (i) within the geographic area occupied by a species, at the time it is listed, on which are found those physical or biological features (I) essential to conserve the species and (II) that may require special management considerations or protection; and (ii) specific areas outside the geographic area occupied by the species at the time it is listed upon determination that such areas are essential to conserve the species.
